

WORLD OF GREEN, INC.

The Shade Makers®

CUSTOM TREE HARVESTING AND TRANSPLANTING

Founded in 1971, World of Green, Inc. is a multi-faceted contracting firm that specializes in tree production, sales and transplanting. We have been instrumental in the development of modern tree moving machinery and have significantly impacted global environmental awareness and the necessity for tree preservation efforts. Our contracting activities are primarily within the USA with specialization in golf and resort facility development. We have active tree growing operations that cater to wholesale markets, although, we do provide large caliper shade and ornamental trees to individuals. Our tree transplanting equipment fleet allows us to rapidly deploy both machinery and personnel to areas where native trees are likely to be destroyed during construction or renovation activities.

We promote the practice of tree transplanting on a global basis and have actively traveled Asia and Latin America in that pursuit. Our history within Arlington began with the planting of Seven Seas and Ranger Stadium in the early 1970's. Since that time, we have concentrated on honing the skill of tree transplanting and expanding our market share within the commercial sector of that specialized industry. World of Green, Inc. has an extensive list of corporate and private sector references that will attest to its well-developed skill and proven abilities. In recent years, our activities have centered on residential and commercial property development, nut tree farming and golf facility construction.
